

"Barenaked Ladies The Big Bang Theory Theme Song lyrics"

Our whole universe was in a hot dense state,
Then nearly fourteen billion years ago expansion started. Wait...
The Earth began to cool,
The autotrophs began to drool,
Neanderthals developed tools,
We built a wall (we built the pyramids),
Math, science, history, unraveling the mysteries,
That all started with the big bang!

"Since the dawn of man" is really not that long,
As every galaxy was formed in less time than it takes to sing this song.
A fraction of a second and the elements were made.
The bipeds stood up straight,
The dinosaurs all met their fate,
They tried to leap but they were late
And they all died (they froze their asses off)
The oceans and Pangea
See ya wouldn't wanna be ya
Set in motion by the same big bang!

It all started with the big BANG!

It's expanding ever outward but one day
It will pause and start to go the other way,
Collapsing ever inward, we won't be here, it won't be heard
Our best and brightest figure that it'll make an even bigger bang!

Australopithecus would really have been sick of us
Debating how we're here, they're catching deer (we're catching viruses)
Religion or astronomy (Descartes or Deuteronomy)
It all started with the big bang!

Music and mythology, Einstein and astrology
It all started with the big bang!
It all started with the big BANG!

'Eric Idle'(Monty Python) 'Galaxy Song'

WHENEVER LIFE GETS YOU
DOWN, MRS. BROWN, AND
THINGS SEEM HARD OR TOUGH,
AND PEOPLE ARE STUPID,
OBNOXIOUS OR DAFT AND YOU
FEEL THAT YOU'VE HAD QUITE
ENOUGH...

Just remember that you're standing on a planet that's evolving,
And revolving at 900 miles an hour,
That's orbiting at 19 miles a second, so it's reckoned
A sun that is the source of all our power.

The sun and you and me and all the stars that we can see,
Are moving at a million miles a day
In an outer spiral arm, at 40,000 miles an hour
Of the Galaxy we call the Milky Way.

Our Galaxy itself contains 100 billion stars
It's 100,000 light years side to side
It bulges in the middle, 16,000 light years thick
But out by us it's just 3,000 light years wide

We're 30,000 light years from galactic central point,
We go round every 200 million years
And our Galaxy is only one of millions and billions
In this amazing and expanding Universe
As fast as it can go, at the speed of light you know,
12 million miles a minute, and that's the fastest speed there is.

So remember when you're feeling very small and insecure
How amazingly unlikely it is your birth
And pray that there's intelligent life somewhere up in space,
Because there's bugger all down here on Earth.
