## Calculating Geologic Time

Assume that you have a rope 100 m long. Your job is to figure out where on the rope to place a marker for each of the events listed below. Calculate the percentage of the earth's total age, then convert that to how many meters they are along the rope.

|  | Event | mya | \% | m |
| :---: | :--- | ---: | :---: | :---: |
| 17 | humans dominate | 0.1 |  |  |
| 16 | last ice age | 0.2 |  |  |
| 15 | first horses appear | 58 |  |  |
| 14 | extinction of dinosaurs | 65 |  |  |
| 13 | flowering plants | 144 |  |  |
| 12 | 1st birds and mammals | 208 |  |  |
| 11 | 1st dinosaurs | 245 |  |  |
| 10 | end of trilobites | 240 |  |  |
| 9 | 1st reptiles | 286 |  |  |
| 8 | 1st large trees | 320 |  |  |
| 7 | 1st amphibians | 408 |  |  |
| 6 | land plants | 438 |  |  |
| 5 | fish | 505 |  |  |
| 4 | trilobites | 2500 |  |  |
| 3 | multicelled organisms | 3800 | $\mathbf{8 2 . 6}$ | $\mathbf{1 7 . 4}$ |
| 2 | single celled organisms | 4600 | $\mathbf{1 0 0}$ | $\mathbf{0}$ |
| 1 | oldest known rocks |  |  |  |
| 0 | formation of earth |  |  |  |

Determine your current age in months
Using the same percentages calculated above, determine your age in months when each of the numbered events occurred.

| Event | \% | Age in Months |
| :---: | :--- | :--- |
| 17 |  |  |
| 14 |  |  |
| 11 |  |  |
| 5 |  |  |
| 1 |  |  |
