12:20 – 3:30 – focus on Health and Safety

Special thank you to Mrs. Dziarski and the Student's Council for a smoothly run Winter Carnival. You couldn't have asked for better weather!

**Rockin' Rollin" Toyota** – by the Room 2 Crew (unfortunately, no photos were allowed to be taken on this trip)

It was a sunny Wednesday when the grade three-four class travelled to Toyota. We went there because we wanted to learn about the science of how cars are made. While we were there we looked at how car parts are put together. We travelled on a tram around the plant. We saw big machines and sparks flying as pieces of metal were welded together. We learned that it takes 23 and half hours to assemble one car from start to finish. We also found out that 8000 people work at Toyota but that's not all! It was also interesting to discover that robots help put the cars together too! The biggest robot is named Godzilla and came

form Japan. We had a car-fabulous time on our trip. Thank you to Toyota for making this trip possible and to the parent volunteers who joined us!
